## Adamera Reports Drilling Results

**Vancouver, B.C., January 15, 2019 - Adamera Minerals Corp.** (TSX V: ADZ; OTC: DDNFF) reports laboratory results for drill hole OS18-02B at the Oversight Project in Washington State. The hole is a redrill of drill hole OS18-02 announced on September 26, 2018. A number of lower grade gold intercepts were returned. Results from OS18-04 drilled further to the north are pending.

OS18-02B results are shown in the table below.

	<b>From (m)</b>	<b>To (m)</b>	<b>Gold (g/t)</b>	<b>Interval (m)</b>
OS18-02B	27	28.8	1.2	1.8
OS18-02B	32.6	33.4	1.3	0.8
OS18-02B	35.3	50	0.2	14.7
OS18-02B	62.7	67.3	1.0	4.6
OS18-02B	82.7	102.1	0.25	19.4
OS18-02B	117.6	120.6	2.0	3.0
Incl.	117.6	118.0	4.2	0.44

*Table 1. Zones with anomalous gold in drill hole OS18-02B*

Magnetite intersected in drill hole OS18-02B contains 4.5 times more gold on average than the magnetite zone in OS17-03 and OS17-01 to the south. At the Overlook Mine, a general increase in gold content of the magnetite typically occurs immediately adjacent to and often contributes to the high-grade zones. Arsenopyrite, which frequently correlates with high-grade gold on the property, locally forms up to 15% of the rock in OS18-02B. The presence of arsenopyrite is not noted in drill holes to the south.

*“The Oversight prospect remains a valid target. Although OS18-02B did not intersect an anticipated high-grade gold zone, the overall increase in gold content and introduction of high arsenopyrite provides encouragement for further drilling. Results from drill hole OS18-04 will provide information to help complete the picture,”* says Mark Kolebaba, President and CEO of Adamera Minerals Corp.

Results for drill hole LFS18-01 on the Lamfoot South prospect were also received. No significant gold bearing zones were intersected. A hole to drill the target from the opposite side is tentatively planned.

Martin St. Pierre P.Geoph, is a Qualified Person as defined by National Instrument 43-101 and has reviewed data associated with the project. Gold analysis was completed by Activation Laboratories using fire assay methods.

### About Adamera

Adamera Minerals Corp. is exploring for a stand-alone high-grade gold deposit within hauling distance of an existing mill near Republic Washington. This area has reportedly produced over 6 million ounces of high-grade gold. Adamera is the dominant regional explorer in the area.

On behalf of the Board of Directors,

Mark Kolebaba  
President & CEO
